

Junior Developer

I am interested in the Junior Developer position because I believe this position is an opportunity to utilize my skills and abilities to promote an outstanding web presence. I bring skills and qualifications that make me not only qualified for this position but uniquely positioned to be the ideal candidate for this position. I have the education, experience, and traits to exceed expectations for this position and provide high quality outcomes.

My education meets or exceeds the requirements of this position. I have an Associate of Arts degree in Criminal Justice. I also completed a Bachelor of Arts degree in Political Science. I have continued my education throughout the years and have been taking courses part-time pursuing a degree in Computer Information Systems. I have fewer than 30 hours remaining to complete this degree.

In a previous position with the state of Missouri, I was the Vocational Teacher instructing students in web design and graphic design. I was responsible for adjusting curriculum to meet educational goals, provide evaluations of their learning. The course was designed as a business course, so I included concepts of e-commerce, marketing, and social media. While this role originally began as teaching a curriculum that was dependent on Adobe Creative Suite, I thought my students would benefit from additional materials that were less vendor/software reliant. I introduced Jon Duckett's HTML & CSS to the class and it improved student understanding and retention. This led to the curriculum being adjusted to include this and other suggestions. This teaching experience was particularly helpful, as it provided me a unique opportunity to help others who had very different experiences from myself and helped me get better at communicating and building relationships with people of different backgrounds from myself.

I have worked in technology for several years and I have developed a reputation of being able to achieve valuable solutions. When working for Missouri Women, Infants, and Children (WIC) I was eager to help find solutions that benefited the organization. I updated web pages on their Bootstrap site and contributed to the design of the e-WIC portion of the site which due to federal mandate had become a critical focus. I was recognized by my colleagues for suggesting a new subdomain for the department. The department improved reach and streamlined marketing materials by using <https://wic.mo.gov/> in lieu of <https://health.mo.gov/living/families/wic/>.

I have a diverse background largely because I have a naturally inquisitive mind and the courage to try new things. I am always trying to learn and grow. I live the mantra of a life-long learner. I am always learning about new technology and finding ways to use the technology. I also learn more about myself along the way. I learn about my weaknesses and strengths. I find out how both my formal education and experiences, help improve the lives of others around me. I have helped employers, friends and family, and co-workers find better ways to do things and improve their workplaces, personal lives, and careers. I am sure that I can be a great asset to your organization, and you will not be disappointed if provided with an opportunity to interview.
